

Allen Warren,
Stokes, NC

Wesley, 17

Ethan, 12

**How a North
Carolina family
used a new
“nanotech” spray
on burley tobacco —
and grew...**

**\$1,500 more
profit per acre!**

The rich aroma of money!
Allen Warren stands 6 ft. tall.
At harvest, his burley was
almost as tall as he is — with
leaves up to 4 ft. long. *Quality
is so high that almost all
leaves were baled for sale.*

Until now, burley grower Allen Warren hasn't told anyone about the product he tested this season: He and sons Wesley and Ethan sprayed 4.5 acres of burley with a new “nanotechnology” adjuvant called *SoySoap* by BioBased US.

As the crop grew, Allen saw his burley develop huge leaves with the “thick, leathery, bony” quality that earns premium prices. Around Stokes, NC, a 2,000-lb. per acre burley crop is considered good. But Allen's family is baling 3,000 lbs. or more per acre. That extra 1,000 lbs. is earning them at least another \$1,500 per acre!

Their crop was healthy. Insect pressure was light. The leaves are heavy. Allen is so confident you'll see the same response in burley and flue-cured tobacco that he's now a distributor for the product under his private trademark: *Heighten Plus*. Call him at 252-341-5753 or visit his new website: www.heightenplus.webs.com.

Other growers using this new technology are profiting with higher quality and yield gains up to 50%. “You can smell the healthier aroma,” says a flue-cured grower. Of all crops that respond to *SoySoap*, tobacco is most dramatic!

BioBased USA reserves the name *SoySoap* for its family of biobased, non-toxic “nano-technology” formulations to enhance plant growth and clean up our environment. Authorized distributors private-label each BioBased USA product under registration requirements of their state or country. BioBased USA does not sell directly to growers or consumers.
