SoySoap helped
this family raise
burley with high
yield and quality
for sales over**

\$5,000 per acre!

Burley grower Allen Warren of Stokes, NC credits a new "nanotech" adjuvant called *SoySoap* for higher yield and higher quality premiums on his 2009 burley crop. As you know, tobacco buyers are *insisting on high quality*. Many are refusing contracts with producers unless they have a record of delivering quality! Here's what Allen Warren saw in his 4.5 acres of tobacco:

- 1. High-quality leaves earned premium prices.** Tobacco from one acre which Allen sprayed *twice* sold for \$1.84 per pound, with most bales grading 1. Tobacco from 3.5 acres sprayed *once* brought \$1.80 per pound; these bales graded 1 or 2.
- 2. Outstanding yield.** In this area, a 2,000-lb. per acre burley yield is considered good. The tobacco which Allen treated twice yielded close to 3,000 pounds. Tobacco treated once yielded around 2,300 pounds.
- 3. There was virtually no disease,** even though he didn't fumigate soil. Insect pressure was light, indicating a healthier, stronger tobacco plant.

Flue-cured tobacco growers using *SoySoap* have seen yield gains up to 50%, plus better-curing tobacco that grades higher. Mark Smitherman of East Bend, NC, says *SoySoap* produces high-quality flue-cured leaf: "You can smell the healthier aroma."

In 2009, about 75 tobacco growers tested *SoySoap* treatment protocols, up to four spray applications:

- ✓ Soon as possible after transplanting
- ✓ At layby
- ✓ At pre-bloom
- ✓ Tank-mixed with MH.

Cold weather in Fall 2009 revealed another benefit of *SoySoap*: Frost protection. Barry Newsome of Farmington, KY heard a forecast low of 29°F for Oct. 17. He sprayed *SoySoap* on his tobacco Oct. 16. Freezing temps lasted six hours on Oct. 17. Ice formed on the leaves of his tobacco, but the crop had no injury. Nearby tobacco fields had substantial freeze damage.

Ask a distributor shown below for details on how to use *SoySoap* for high-quality, high-yielding tobacco!

Please contact one of these distributors:

North Carolina, South Carolina, Virginia: Allen Warren 252-341-5753 adjallen@gmail.com
Tennessee, Kentucky, Ohio and Missouri Bootheel: Steve Mosely 731-336-2366 mozman09@yahoo.com

BioBased USA of East Bend, NC, reserves the name *SoySoap* for its family of biobased, non-toxic "nanotechnology" formulations to enhance plant growth and clean up our environment. Authorized distributors private-label each BioBased USA product under registration requirements of their state or country.
